

Imagining Alternatives

.....

Actor needs to **Need** because **Insight**.

Ideation

.....

Review

Ideation is...

...the creative act of generating ideas - both a stance or orientation and a set of enabling strategies.

“How might we..?”

“How might we...?” statements are mechanisms for enabling ideation by reframing our POVs as provocations.

Point of View

A harried mother of three, rushing through the airport only to wait hours at the gate, needs to entertain her playful children because “annoying little brats” only irritate already frustrated fellow passengers.

How Might We...?

...use the kids' energy to entertain fellow passengers?

...separate the kids from the fellow passengers?

...make the wait the most exciting part of the trip?

How Might We...?

Amp up the good: HMW use the kids' energy to entertain fellow passenger?

Remove the bad: HMW separate the kids from fellow passengers?

Explore the opposite: HMW make the wait the most exciting part of the trip?

Question an assumption: HMW entirely remove the wait time at the airport?

Go after adjectives: HMW we make the rush refreshing instead of harrying?

ID unexpected resources: HMW leverage free time of fellow passengers to share the load?

Create an analogy from need or context: HMW make the airport like a spa? Like a playground?

Play POV against the challenge: HMW make the airport a place that kids want to go?

Change a status quo: HMW make playful, loud kids less annoying?

Break POV into pieces: HMW entertain kids? HMW slow a mom down? HMW mollify delayed passengers?

A toddler's parents, trying to avoid potty training accidents that are inconvenient for the parents and discouraging to the toddler, needs to help their child be more patient on the potty because accidents commonly occur after the toddler quickly bores and leaves the potty too soon.

Ideation Methods and Principles

.....

Ideation is...

...the creative act of generating ideas - both a stance or orientation and a set of enabling strategies.

Exercise

In small groups:

1. **Read part 1 and part 6:** [The life cycle of creative ideas: Towards a dual-process theory of ideation – ScienceDirect](#)
2. **Discuss: What are the implications for ideation?**

Principles for Ideation

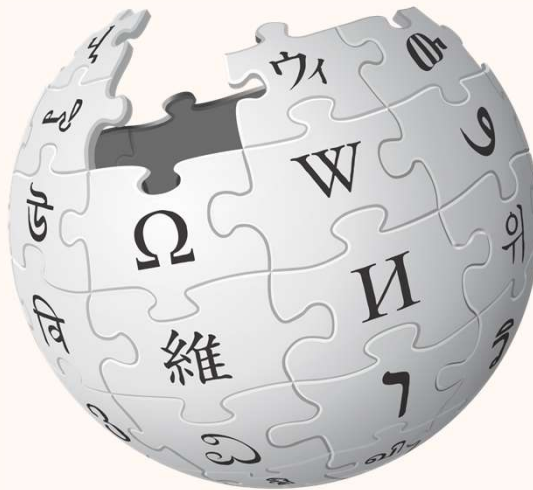

1. **Defer judgment.** You never know where a good idea is going to come from.
2. **Encourage wild ideas.** Wild ideas can often give rise to creative leaps. In thinking about ideas that are wacky or out there we tend to think about what we really want without the constraints of technology or materials.
3. **Go for quantity.** Aim for as many new ideas as possible. Crank the ideas out quickly.
4. **Record everything!** Anything that pops into your head, write it down. One idea per sticky note.
5. **Build on ideas.** Employ *layering* strategies – different methods, different inputs, different rounds, different provocations – to turn one idea into a network of ideas.
6. **Account for difference.** Folks learn and think at different speeds, in different ways; everyone has different levels of comfort and confidence. Use multiple approaches.

Brainwriting

Brainwriting is an ideation method that uses collective intelligence to generate large quantities of ideas.

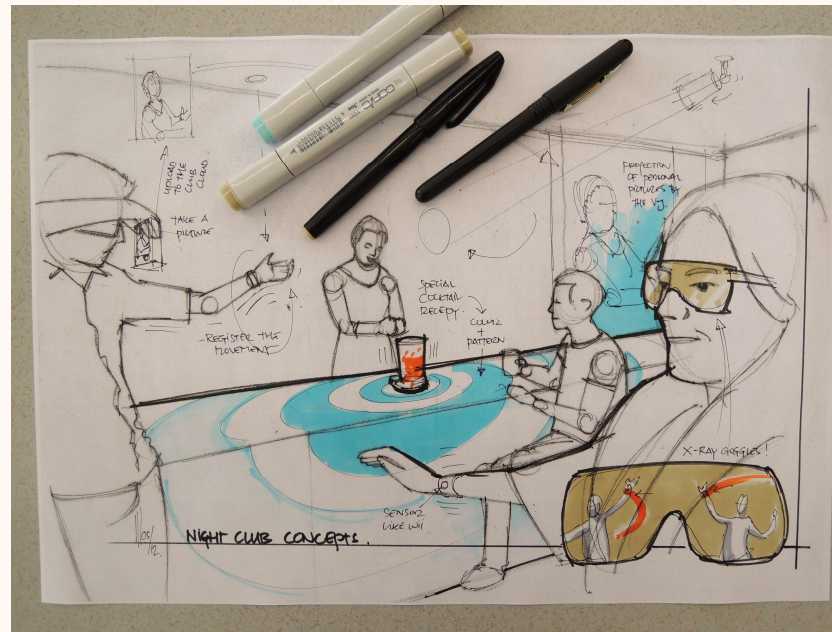

.....

Crowdstorming, Wikistorming, Cheatstorming

Aided brainstorming methods.

.....

Visual Methods

Sketching and storyboarding.

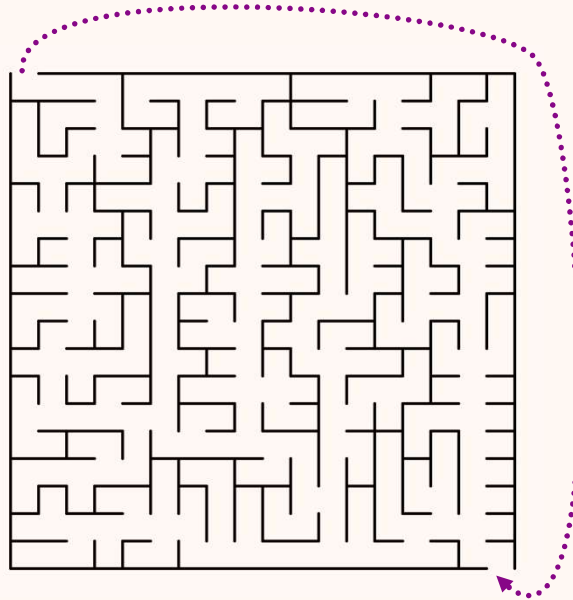

Transformations	Typical Questions
S – Substitute	What can I replace to improve? What happens if I change X to Y? How can I replace the place, time, materials or people?
C – Combine	What materials, features, processes, people, products or components can we combine within the problem area? Where can I create synergy with other products/processes or areas?
A – Adapt	What other products/processes are similar to our problem? What could we change in order to adapt them to our problem?
M – Modify or Magnify or Minimize	How can we change the product/process entirely? Can the product/process be improved making it stronger, bigger, more exaggerated or more frequent? Can the product/process be improved making it smaller, lighter, shorter, less important or less frequent?
P – Put to other uses	What other products/processes could do what we want? How can we reuse other products/processes that are happening?
E – Eliminate	What would happen if we removed a part of the product/process? What would happen if we removed everything? How can we achieve the same objective, if we were not able to do it this way?
R – Rearrange or Revert	What if we revert the process? What if we do step B before step A? What if A becomes the last step and Z becomes the first? What if we perform the two steps together?

SOURCE: (SANTOS, 2012, P.102)

Heuristics

Heuristics are “rules of thumb”. SCAMPER is a heuristic method for generating design alternatives.

Lateral Thinking Methods

Ideation approaches that encourage reframing: worst idea, anti-problem, provocation, analogies, and Six Thinking Hats.

.....

Exercise

In small groups:

1. Choose one of the HMW questions you developed in the last exercise.
2. With the principles in mind, brainwrite!
3. When you've completed your brainwriting and share out, choose another HMW. Instead of brainstorming, try sketching your ideas.
4. Discuss: What differences do you observe between the two approaches?
5. Reflect: When do you ideate in your work? Do you adhere to the principles?

Design Concepts

.....

A design concept is...

...your alternative and the embodiments thereof.

Design Concept

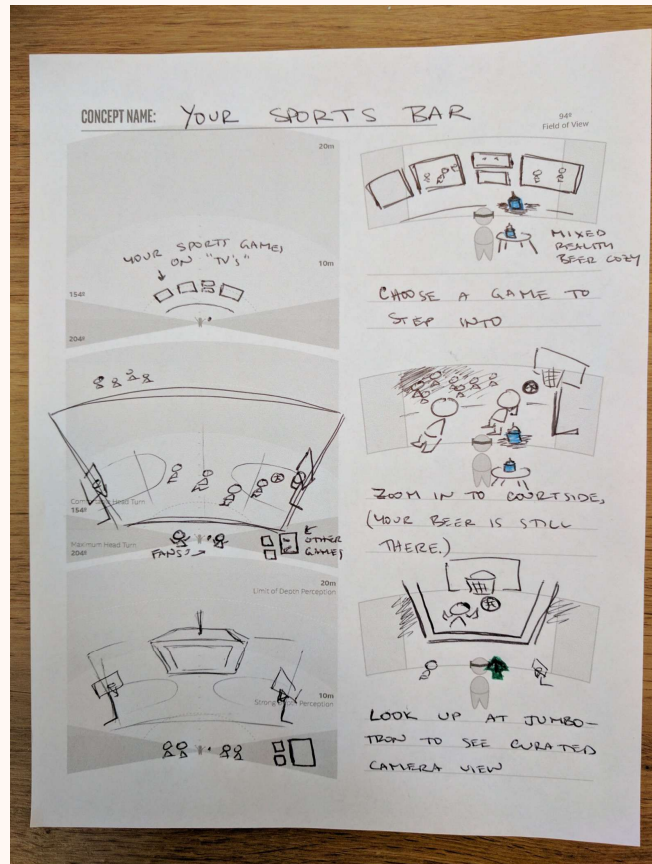

Concepting involves evaluation and creative synthesis to arrive at an alternative that address your point(s) of view.

Design Concept

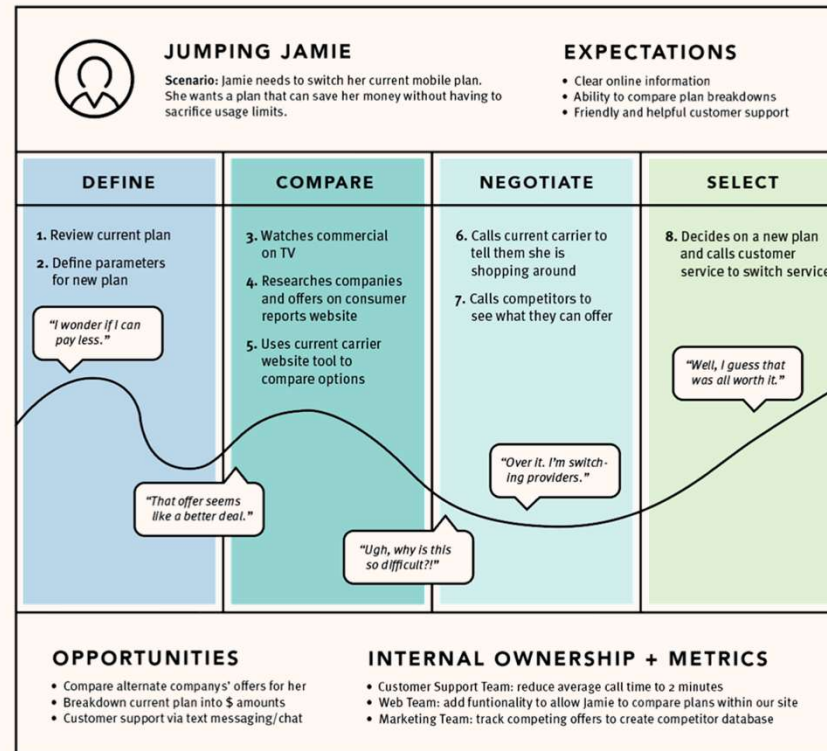

A design concept can be communicated through artefacts.

Storyboards

Storyboards are sequential images conveying key moments in a narrative.

CUSTOMER JOURNEY MAP *Example (Switching Mobile Plans)*

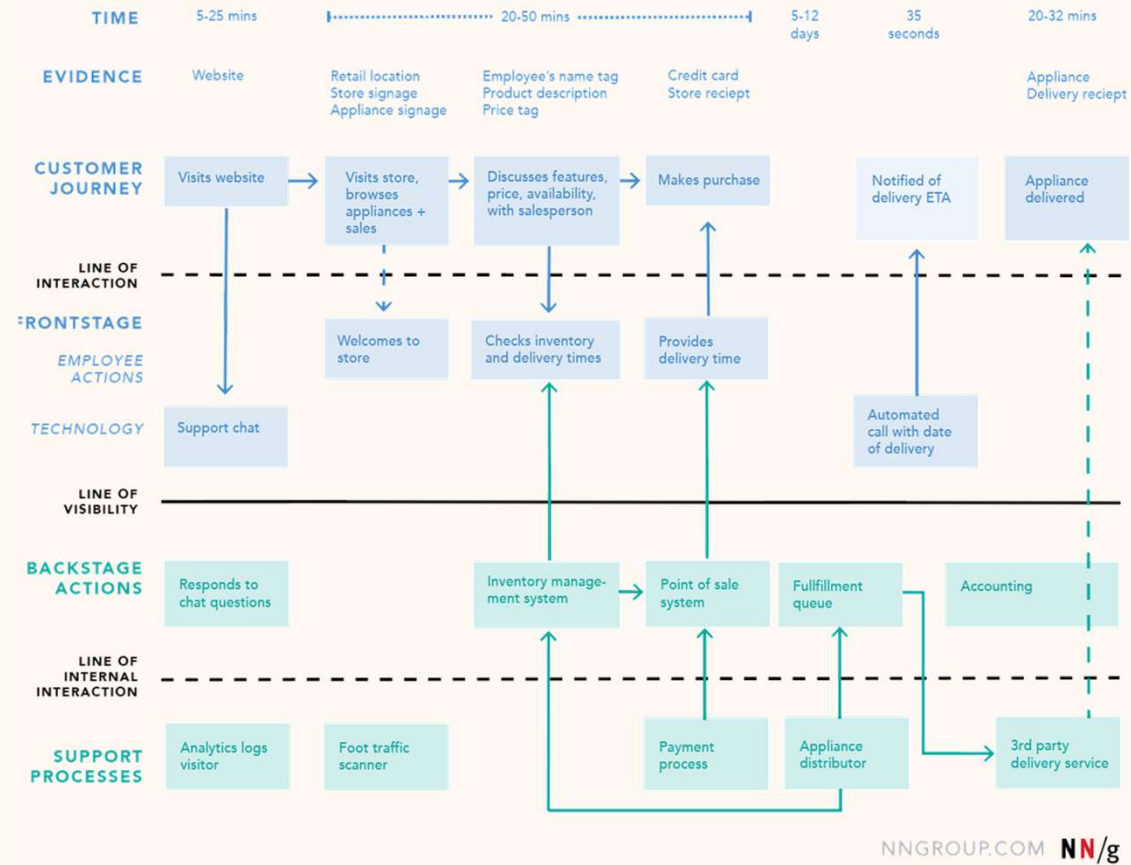

NNGROUP.COM **NN/g**

JOURNEY MAP

Journey maps visualize the process a person goes through as they pursue a goal tied to a specific product or service. It includes the actor, situated in a scenario, who moves through phases in which they take actions, have thoughts, needs, and motivations, and experience feelings.

SERVICE BLUEPRINT *Example (Appliance Retailer)*

Service Blueprint

Service blueprints are visual narratives depicting the delivery of the service.

The Business Model Canvas

Designed for:

Designed by:

On: Day Month Year

Iteration: No.

Key Partners  Who are our Key Partners? Who are our key suppliers? Which Key Resources are we acquiring from partners? Which Key Activities do partners perform? Which Key Channels do partners use? Which Key Relationships do partners have? Which Key Segments do partners serve?	Key Activities  What Key Activities do our Value Propositions require? Our Distribution Channels? Customer Relationships? Revenue streams? Key Resources? Key Partners? Key Channels? Key Segments?	Value Propositions  What value do we deliver to the customer? Which one of our customer's problems are we helping to solve? Which bundles of products and services are we offering to each Customer Segment? Which customer needs are we satisfying? Key Resources? Key Partners? Key Channels? Key Segments? Key Activities? Key Relationships? Key Revenue Streams?	Customer Relationships  What type of relationship does each of our Customer Segments expect us to establish and maintain with them? Which ones have we established? How are they integrated with the rest of our business model? How costly are they? Key Resources? Key Partners? Key Channels? Key Segments? Key Activities? Key Relationships? Key Revenue Streams?	Customer Segments  For whom are we creating value? Who are our most important customers? Which ones have we established? How are they integrated with the rest of our business model? How costly are they? Key Resources? Key Partners? Key Channels? Key Segments? Key Activities? Key Relationships? Key Revenue Streams?
Key Resources  What Key Resources do our Value Propositions require? Our Distribution Channels? Customer Relationships? Revenue Streams? Key Partners? Key Channels? Key Segments? Key Activities? Key Relationships? Key Revenue Streams?		Channels  Through which Channels do our Customer Segments want to be reached? How are we reaching them now? How are our Channels integrated? Which ones work best? Which ones are most cost-efficient? How are we integrating them with customer routines? Key Resources? Key Partners? Key Channels? Key Segments? Key Activities? Key Relationships? Key Revenue Streams?		
Cost Structure  What are the most important costs inherent in our business model? Which Key Resources are most expensive? Which Key Activities are most expensive? Which Key Channels are most expensive? Which Key Segments are most expensive? Which Key Partners are most expensive? Which Key Relationships are most expensive? Which Key Revenue Streams are most expensive? Which Key Activities are most expensive? Which Key Channels are most expensive? Which Key Segments are most expensive? Which Key Partners are most expensive? Which Key Relationships are most expensive? Which Key Revenue Streams are most expensive?		Revenue Streams  For what value are our customers really willing to pay? For what do they currently pay? How are they currently paying? How would they prefer to pay? How much does each Revenue Stream contribute to overall revenues? Key Resources? Key Partners? Key Channels? Key Segments? Key Activities? Key Relationships? Key Revenue Streams?

Models

High level representation of how our solution will work to create and sustain value. Business or mission models, Theories of Change, and logical frameworks are types of models. This class of concepts focuses on how our solution operates within, and interacts with, the larger context.

Exercise

In small groups:

- 1. Review the outputs of your ideation session.**
- 2. Individually: calling on those ideas and considering your point of view, begin assembling a design concept.**
- 3. Note: design concepts can take many shapes, but for this exercise, use a simply storyboard to communicate your concept.**
- 4. Share in your group and discuss: which ideas did you bring to the fore? Which did you set aside?**
- 5. Discuss: What additional research would you conduct?**

A toddler's parents, trying to avoid potty training accidents that are inconvenient for the parents and discouraging to the toddler, needs to help their child be more patient on the potty because accidents commonly occur after the toddler quickly bores and leaves the potty too soon.
